

Interview Evaluation Report

Report Summary:

Technical Skill: 8/10

The interviewee demonstrated good knowledge of the Bellman-Ford algorithm and its application in finding the shortest path in a graph with negative weight edges. They correctly mentioned the graph data structure and identified the cases where there exists a negative weight cycle. The explanation was not provided for the edge cases, and the interviewee, making it difficult to communicate and explain the time complexity and space complexity of each case. The interviewee's communication was poor, making it difficult to understand the explanation. The interviewee's communication was poor, making it difficult to understand the explanation. The interviewee's communication was poor, making it difficult to understand the explanation.

Communications. The interviewee's tone was a bit harsh, but they declared and explained the cases where there is a negative weight cycle, and the interviewee's communication was poor, making it difficult to understand the explanation. The interviewee's communication was poor, making it difficult to understand the explanation. The interviewee's communication was poor, making it difficult to understand the explanation.

Communication of edge cases, the interviewee's explanation was poor, and the interviewee's communication was poor, making it difficult to understand the explanation. The interviewee's communication was poor, making it difficult to understand the explanation. The interviewee's communication was poor, making it difficult to understand the explanation.
